

Payment Service BRD

Project Overview

The Payment Service allows customers to make online payments using Credit Card, Debit Card, UPI, and Net Banking.

Business Objective

Provide a secure and user-friendly payment experience for customers purchasing products online.

Functional Requirements

FR-1: User Authentication

- Users must be authenticated before initiating a payment.
- Unauthenticated users should be redirected to the login page.

FR-2: Payment Initiation

- Users should be able to enter payment details.
- System should validate mandatory fields.
- System should validate payment amount.

FR-3: Payment Processing

- System should process payment through the payment gateway.
- Successful payments should generate a transaction ID.
- Failed payments should display an error message.

FR-4: Payment Confirmation

- System should display payment success confirmation.
- System should send confirmation email to the user.

FR-5: Transaction History

- Users should be able to view transaction history.
- Users should be able to filter transactions by date.

Non-Functional Requirements

- Response time should be less than 3 seconds.
- System availability should be 99.9%.
- All payment information must be encrypted.

Acceptance Criteria

- User can successfully complete payment.
- Invalid payment details should be rejected.
- Transaction ID should be generated for successful payments.
- Confirmation email should be sent after successful payment.
